

Project Initialization and Planning Phase

Date	1 August 2026 - 28 August 2026
Team ID	XXXXXX
Project Title	Food Ordering Behavior Analysis using Tableau
Maximum Marks	3 Marks

Project Proposal (Proposed Solution) template

This project uses Tableau to convert food ordering data into clear visual insights for business, operations, and customer-focused decisions.

Project Overview	
Objective	Analyse 50,000 food ordering records in Tableau to identify order demand, customer spending patterns, cuisine and meal preferences, city performance, and timing-related operational patterns.
Scope	Covers city, cuisine, meal type, order time, day type, restaurant type, order value, delivery fee, discounts, ratings, repeat orders, mood, hunger level, company, rainy weather, and time_taken_to_order. The scope is descriptive analytics using the supplied CSV and Tableau workbook.
Problem Statement	
Description	The food delivery business has large amounts of order data, but raw records make it difficult to quickly identify which cities, cuisines, meal periods, and customer segments perform best. The dataset contains 50,000 orders across 6 cities, 6 cuisines, and 4 meal types.
Impact	A clear dashboard can help the business focus on high-demand markets, understand spending and repeat-order patterns, monitor timing-related workload, and improve decisions on offerings and resource allocation. The analysis shows Mumbai has the highest order volume (8,443), while Evening is the busiest order-time period (12,550 orders).
Proposed Solution	
Approach	Import the CSV into Tableau, verify fields and records, create calculated summaries and interactive charts, compare segments using filters, and build dashboards around demand, customer behavior, and operations. Use the Food.twb workbook as the Tableau solution file.
Key Features	Interactive city, cuisine, meal type, and time analysis; order value and delivery-fee comparisons; repeat-order and rating views; time_taken_to_order distribution; peak-period analysis; and scenario-based insights for Rahul, Priya, and Neha.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		

Computing Resources	Laptop/desktop for Tableau analysis	4-core CPU or equivalent
Memory	RAM for Tableau workbook and CSV analysis	8 GB RAM or higher
Storage	CSV dataset, Tableau workbook, and exported dashboards	256 GB SSD or higher
Software		
Frameworks	Visualization and dashboard platform	Tableau Desktop
Libraries	No separate programming libraries required	Tableau built-in calculations, filters, parameters
Development Environment	Dashboard development and versioned project files	Tableau Desktop with Food.twb; CSV source
Data		
Data	Source, size, and format	food_ordering_behavior_dataset.csv - 50,000 rows, 19 columns; Tableau workbook: Food.twb
